

HIGH RISE

Fill the grid so that each cell in an outlined block contains a digit. A block of two cells contains the digits 1 and 2, a block of three cells contains the digits 1, 2 and 3, and so on. No same digit appears in neighbouring cells, not even diagonally. Each digit inside the grid represents the height of a skyscraper in that cell. Each clue outside the grid represents the number of skyscrapers that can be seen from that point, looking along the adjacent row or column. Taller skyscrapers hide shorter ones.
